

Harness the power of J2EE.

JAYCORE

JayCore Time: Time is money—money is profit

Until now, the benefits of J2EE technology have only been available to organisations with deep pockets and a development team of skilled Java programmers.

With JayCore™, Corexe has opened up the world of J2EE architecture to everyone—and you don't even need to be a Java J2EE programmer to take advantage of it!

The JayCore™ Environment

Being a Java application, JayCore™ will run anywhere. Whether you run Microsoft, Apple, AIX, Linux, Solaris or practically any other platform that supports the Java VM, JayCore™ will bring its benefits home.

JayCore™ Benefits

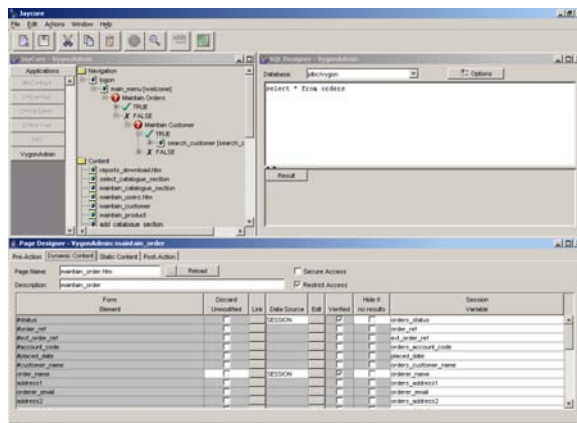

- Reduce time to market
- Reduce costs
- No Java programming
- Reduced maintenance costs over the application lifecycle
- Runs with most J2EE compliant Web Servers
- One click to deploy (no need to code XML)
- Connects to multiple data sources from one application
- Data can be presented on pages in a single result set or as multiple, indexed pages
- Add SSL (security) with a single click
- Handles complex business logic
- Reuse HTML templates
- Add sophisticated hyperlink processing
- Prevents URL copying/reuse
- Develop Web reports in real time
- Shopping Basket functionality easily implemented
- **New Release**
 - Enhanced Action control on page load and submit
 - Call your own Java Classes and EJB's at any point in a page
 - Populate JayCore-built pages from in-house Java and write data back if required

Get ahead of the game in JayCore™ Time

Testimonials:

'An immensely powerful tool. With JayCore™, Corexe has opened up the J2EE world to everyone who needs Internet systems today, not sometime in the future. JayCore™ is easy to use, enables rapid creation of software without the need for expensive technical resource and gives an unparalleled boost to ROI' - Edgar Smith, Technical Director, Cresta Group, London.

'As an organisation that has to rely upon external sources for its IT software and systems, it has come as a refreshing experience to work with a company that delivers what it says it will deliver when it says it will deliver it and at the agreed cost, a very rare commodity in my experience.' - Sue Power, Finance & IT Manager, Vygon UK Ltd.

JayCore™'s USP

TCO (Total Cost of Ownership) and ROI (Return On Investment) are the driving forces of today's information services. Lower the former, increase the latter and you have a win-win scenario!

As you use JayCore™ on more and more projects, its TCO is driven down. Every new Internet application developed and deployed with JayCore™ slashes its TCO. Your ROI rises dramatically at the same time.

Get ahead of the competition. Win more business. React with the market, not behind it.

Deliver Web Applications for the Real World
